

Inkle Assignment: Frontend Intern

Problem Statement:

- You will be given a design and the API to build a UI which is close to the real-world problems you face in day-to-day work.
- Use [@tanstack/react-table](#) for the table UI.

Design:

<https://www.figma.com/design/qA7zblx7OOC7OA0Yf5Wrzy/Interview?node-id=0-1&p=f&m=dev> (Page 1)

User flow with instruction:

- User lands on a table
- Table can be built only using [@tanstack/react-table](#)
- They should be able to see the details similar to the design
- On click on edit icon open Edit modal
- User can change name and country in the modal
- Country is a dropdown, take the list from the countries API given below
- On save, the data should be passed to the PUT api with existing data and updated fields.
- Focus on working product, quality code, no bugs, and seamless flow
- Pixel perfect UI
- Bonus: Good UI/UX

APIs:
